Abstract

This document describes the process to document the deprecated functions still in use.

Group / Owner

Development / Software Developer

Motivation

This document is motivated by the need to have formal processes in place to track outstanding use of deprecated (unsafe) functions within safety-critical, cyber-physical systems for certification of compliance to standards such as **ISO 21434** and **ISO 26262**.

Overview

Many commonly used functions and APIs are not secure in the face of the current threat environment. As these present an ongoing threat to security, they should be replaced with secure

alternatives where possible. In order to be able to assess the overall risk presented by their continued use, they should be documented, and their presence justified.

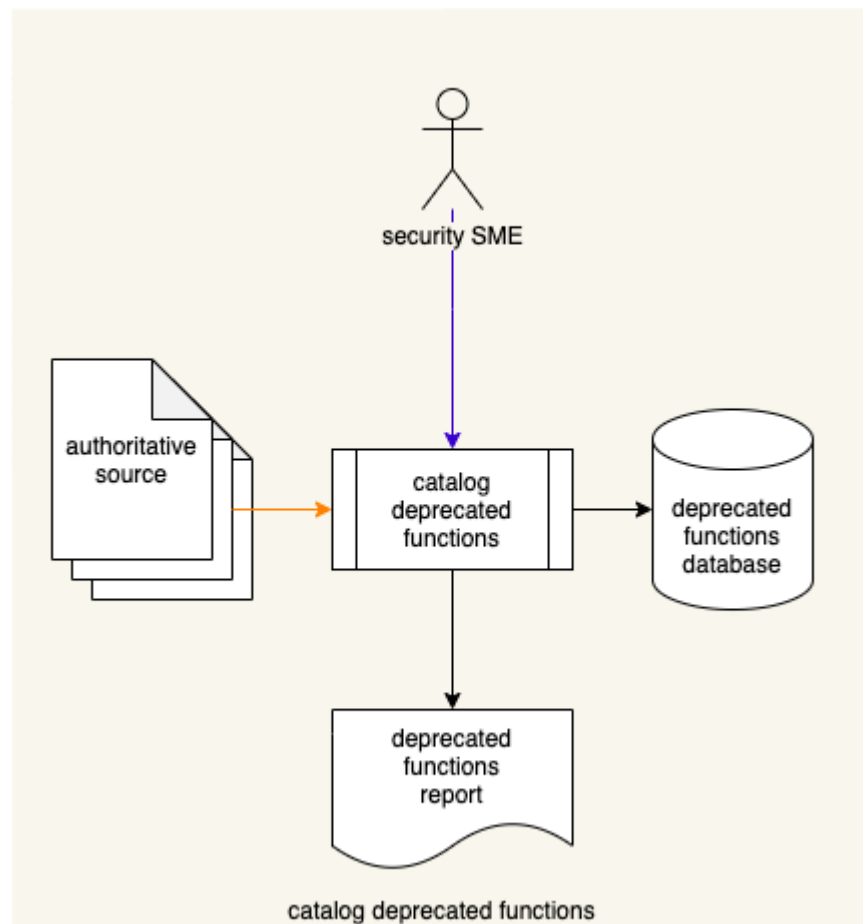

The following diagram illustrates the process to be used:

Process

Catalog Deprecated Functions

Inputs	Authoritative source
Outputs	Deprecated functions database Deprecated functions report
Participants	Security SME

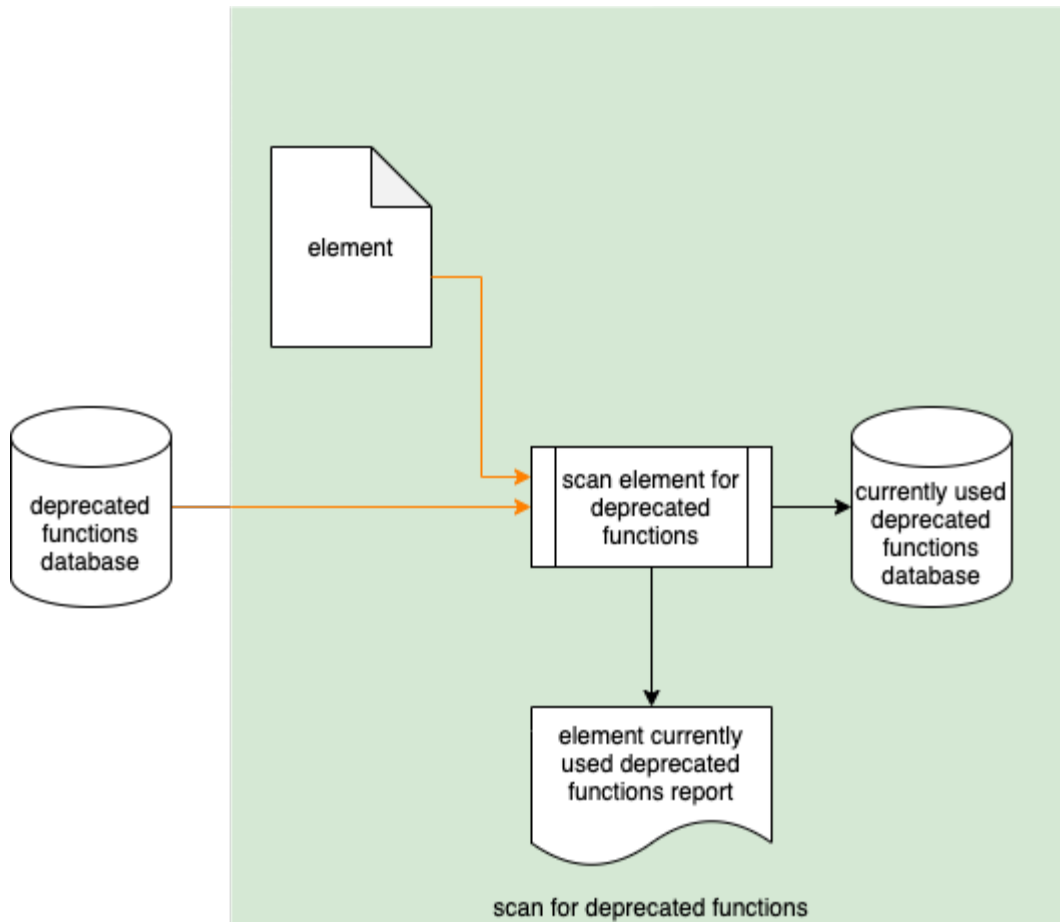

The Security SME reviews the **Authoritative Source** to identify deprecated functions. A **Deprecated Functions Report** is generated.

All identified deprecated functions are entered into the **Deprecated Functions Database**.

Scan for Deprecated Functions

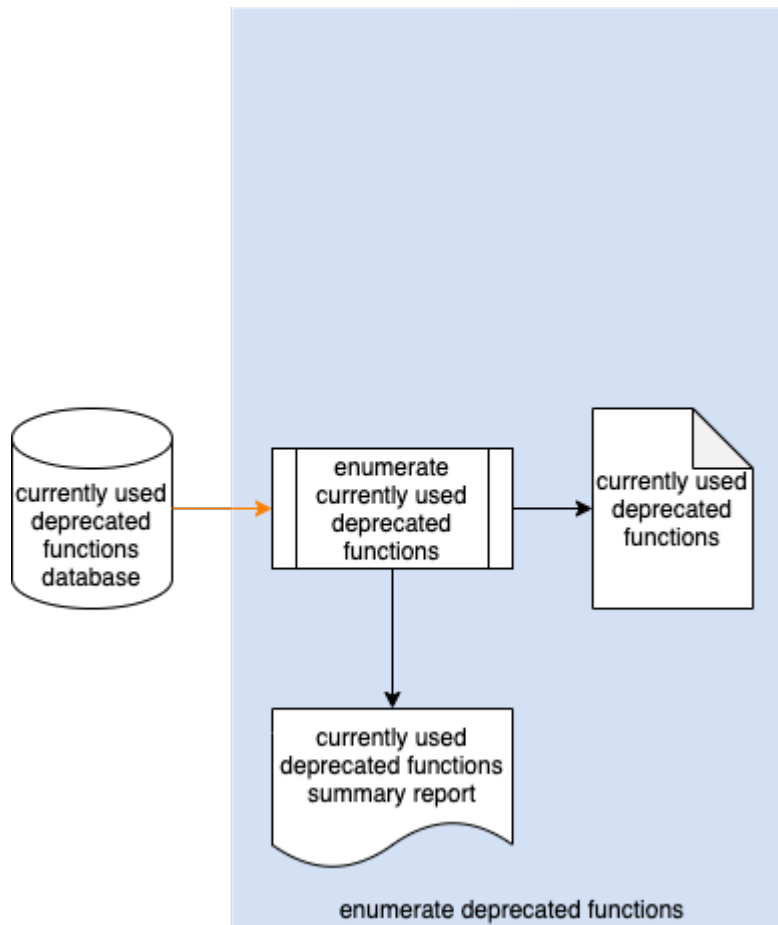

Inputs	Element Deprecated functions database
Outputs	Currently used deprecated functions database Element currently used deprecated functions report
Participants	none

With the **Deprecated Functions Database**, the **Element** is scanned for deprecated functions currently in use. The **Currently Used Deprecated Functions Database** is updated, and a **Currently Used Deprecated Functions Report** is generated.

Enumerate Deprecated Functions

Inputs	Currently used deprecated functions database
Outputs	Currently used deprecated functions Currently used deprecated functions summary report
Participants	none

Using information from the **Currently Used Deprecated Functions Database**, the database iterates over the deprecated functions and categorizes them by programming language. A machine-readable **Currently Used Deprecated Functions** list is generated. A human readable **Currently Used Deprecated Functions Summary Report** is also generated from the machine-readable list.
